

RIKEN Genomic Sciences Center NMR Facility

Nuclear Magnetic Resonance (NMR) is being used to discover the structure and functions of genes and genomes. The use of non-magnetic FiBRA components as reinforcing rods in the concrete foundations means that the magnetic fields around sensitive equipment will not be disturbed.

- **Owner:**
The Institute of Physical and Chemical Research
- **Location:**
Kanagawa prefecture
- **Dimensions:**
Total length: 30,000m
- **Materials:**
FiBRA RA13S
- **Application:**
Non magnetic reinforcement
- **Completed:**
Mar '00
- **ACC Projects list:**
152
